

System Integrity Performance Metrics Summary

In accordance with the requirements of Section 17 of Joint Stipulation 2015-UN-049, Atmos Energy Corporation (Atmos Energy) is providing the Mississippi Public Utilities Staff (MPUS) with the results of performance metrics that measure reductions in incidents and safety-related events, including a year-over-year comparison of leak repairs made, and the year-over-year comparison of leak calls received from customers or third parties as well as the overall effectiveness of the system integrity program, including any reduction in Operation and Maintenance (O&M) expenses associated with system integrity projects.

Leak Repairs

Atmos Energy has provided leak repair data for CY's 2018, 2019, and 2020 in Table I below.

Facility	2018 Repairs	% of Total	2019 Repairs	% of Total	Δ - 2019 to 2018	2020 Repairs	% of Total	Δ - 2020 to 2019
Mains	624	16.0	448	16.4	(176)	340	17.3	(108)
Services	3,276	84.0	2,282	83.6	(994)	1,622	82.7	(660)
Total Leaks	3,900	100.0	2,730	100.0	(1,170)	1,962	100.0	(768))

Table I

The leak repair data in Table I shows the continuation of a consistent 16/84 split between main and service line leaks within the Mississippi Division. As discussed in previous testimony, the repair data clearly shows that service leaks currently occur more frequently than main leaks. Atmos Energy does not anticipate that this trend will change until significantly more legacy steel service lines that were constructed with obsolete joining technologies are replaced.

In its March 15, 2020 filing, Atmos Energy anticipated that the number of leaks repaired could continue to grow annually for the foreseeable future due to the accelerated leak surveys that were being done as a risk reduction action in high leakage areas under its Distribution Integrity Management Program. In 2020, the number of leak repairs was not as high as anticipated. The better than anticipated results can be directly attributed to Atmos COVID-19 measures which slowed its ability to proactively perform leak repairs throughout most of 2020 except for Grade I leaks that had to be fixed immediately or Grade II leaks that had an approaching repair date. It is important to note that this decrease may also be attributable to the type of piping materials within those leak survey areas done during 2020 as survey areas significantly comprised of plastic pipe will generally have less leakage than areas with significant footage of legacy steel piping. More data points are required to ascertain whether a definite turning point has been reached, especially in the Jackson area. There exists a number of areas within Jackson where legacy steel pipe, joined by mechanical fittings and/or acetylene welding, is subjected to external forces from expansive clay soils that will make them susceptible to leakage until those mains and services are replaced.

Year	Open Leaks	Difference
2018	753	
2019	830	77
2020	1,428	598

Table II

Opened (or unrepaired) leaks at the end of CY 2020 increased above the CY 2019 level by 72.0% (598/830). This increase in open leaks is attributable to COVID-19 protocols which affected the timing of leak repairs, especially Grade III leaks.

Listed below are the exhibits which Atmos Energy has included in order to provide more granular detail for the leak repairs made in CY 2020. These exhibits provide numerical data in terms of leak cause and location.

- CY 2020 Leak Repairs – Main
- CY 2020 Leak Repairs – Service
- Active Leaks as of 31 Dec 2020 – Scheduled for Repair

Leak Calls Received

Shown below in Table III are the number of leak calls that Atmos received from its customers and third parties during CY's 2018, 2019, and 2020. However, it should be noted that in August 2018, the Greenville Work Center received and responded to approximately 800 Leak Investigation Service Orders that were created as a direct result of an injection odorizer malfunction.

YAZOO CITY	466	411	(55)	426	15
Grand Total	18,103	18,136	33	15,110	(3,026)

Table III

The data above in Table III reflects a decrease of leak investigation service orders across the Mississippi Division when comparing CY 2020 to CY 2019. This decrease equates to 16.69% (3026/18,136) of the 2019 total. In 2019, the Jackson area experienced 1,400 leak investigation calls that were attributable to odors emitting from an industrial entity.

Reportable Incidents/Safety-Related Events

Atmos Energy did not have any reportable or safety-related incidents during 2020.

Summary

In 2020, leak surveys continued to be conducted at an increased frequency, with a significant number of leaks being found and then repaired in accordance with Atmos Covid-19 protocols. As 2020 was the sixth year of the implementation of Atmos Energy's System Integrity Plan, we are just now beginning to survey the pipe that has been replaced. More data points are needed in terms of the aggregated number of annual leak repairs and remaining open leaks in order to properly assess whether a downward trend in leakage has been reached, especially in the Jackson area. To date, there have been no significant reductions in O&M expenses as a result of system integrity activities.
